

Trainer Jane Solomon

Qualifications:

- BSc(Hons) Acupuncture
- BA(Hons) Humanities
- Registered General Nurse
- MBAcC - Member of the British Acupuncture Council
- MNFSH - Member of the NFSH The Healing Trust
- Diploma in Adult Education
- Certificate in TEFL
- Research GCP Trained

Jane has more than 20 years experience of Biofield (Energy Field/Aura) Imaging. She has experience in working as a Complementary Therapist in the past and now as an Acupuncturist in the UK. Jane also offers Biofield Imaging sessions and demonstrations as part of her practice. She has helped practitioners all over the world set up their own Biofield Imaging Clinics. She has also provided advice to individual researchers who want to pursue their own lines of research.

Jane worked with Harry Oldfield for 7 years during the 1990s and was a trainer for the PIP Biofield Imaging system. Jane has experience of teaching Biofield Imaging both to groups and to individuals. She acted as on-site Consultant to help set-up the scanning environment at the Centre of Biofield Sciences in Pune, India.

For more than a decade Jane has been part of the Resolutions Team. Jane has a background in Acupuncture, Nursing, Healing, Research and Teaching.

Jane says:

'I first became interested in Biofield Imaging at the beginning of the 1990s. I was fascinated when I saw Oldfield's PIP system at a weekend course I attended. There on the computer screen I was able to see something tangible which might have relevance to what some individuals over centuries have claimed to see, that is an 'aura' of light emanating from, and surrounding a person. I was sceptical at first but, as I got used to interpreting the scans, I could see that the patterns and gradations of colour on and around people appeared to correlate with their feelings of wellbeing and/or their symptoms. After therapy, changes could be seen towards a more balanced Biofield. I was amazed at how thoughts could change the Biofield towards a more balanced state (with positive thoughts) and, a more imbalanced state (with negative thoughts).

I worked with Oldfield for seven years in his clinic in the UK. As Director of Training for Oldfield Technologies I devised and taught courses on PIP Biofield Imaging in both the UK and internationally. I taught students in Oldfield's clinic as well as at weekend seminars.

At the end of the 1990s I was asked to act as on-site Consultant to help set-up the Centre of Biofield Sciences in Pune, India.

Since that time I have continued nursing and also studying the Biofield, particularly in relation to health and wellbeing. Since qualifying as an Acupuncturist in 2007 I have been looking at Biofield Imaging and the acupuncture meridians and points.

I have spoken to researchers and practitioners over the years and many report that Biofield Imaging has helped them and their clients see where the client's energy is out of balance. They have found that when people feel well this will be reflected in a more balanced field which shows lots of green and also the colours of vitality, e.g. yellow and orange. If someone is stressed, or has a lot of tension in their body, then more red 'congested' light and irregular patterns of light on and around the body are seen.

As people feel better, less red and an increase in green/yellow/orange is often seen. The patterns have been seen to also improve.

Changes towards more balanced colours and patterns have been seen by some therapists after therapy, rest and relaxation, switching to a more healthy diet etc.

Many therapists and clients have found Biofield Imaging to be a useful tool. For the therapist, pre-treatment scans may highlight areas of relative stress which could need treatment. The client may find a pre-treatment scan useful in that they are able to see their areas of energetic congestion. Some have been spurred on to initiate lifestyle changes.

Many therapists have commented they find pre and post treatment scans a beneficial tool for aiding client's progress and morale. Therapists report that showing people a picture of how their biofield has improved with treatment shows them that their feeling of wellbeing is not imagined.

My aim is to help people use Biofield Imaging systems such as BioField Reader so that the research can continue.'
