System Requirements for Biofield Reader

We recommend that you use a computer with as high a specification as possible. We also suggest that it would be advantageous to run the system on a dedicated computer. Obviously, this is not always possible but, failing this, try to keep the number of other programs installed to a minimum. Biofield Reader (BFR) is not an App and is not suitable for iPads and iPhones.

System Requirements
Hardware:
CPU: 3GHz or higher; Memory: 8Gb or more;
Hard drive: 500Gb SSD SATA3; USB 3; IEEE P1394 interface (if required)
System: WIN7, WIN8, WIN10, WIN11.

BFR works on Windows operating systems and we have tested BFR successfully in a Windows' compartment on Mac OS X. We recommend Parallels software for running Windows on a Mac…
https://www.parallels.com/uk/pd/general/

Biofield Reader (BFR) is a flexible system that is designed to work with many external devices, but no guarantee is given for reliability or compatibility with any particular computer or device. Note: Although BFR has not been designed for use with Windows touch screens, many users find that it functions well on a touch screen once they have reduced the font size for screen resolution. Otherwise the mouse can be used as normal.

Pre-installation
It is strongly recommended that you make sure your operating system is up to date. You can download the latest updates and service packs from the Microsoft website.

Biofield Reader comes with CopyMinder (CM) Licence Key Security
You simply download the program from our website and we send you a Licence Key, by email, which enables the program to run. Single-user licence. This version requires regular access to the internet (for security checks) and is for use on one device (computer) only.

After installation of BFR you will need to be online to enter the Licence Key on the first run and you will also be asked to enter a couple of details to register your Licence Key. This type of security negates the need for a dongle. We recommend Parallels software for running Windows on a Mac…

Camera Types
Biofield Reader is not dependent on camera types as it functions solely by image processing.

Still camera

All single image cameras are suitable. The higher the resolution of the photo, the more information is contained in the image. This will give you more information when the image is processed through BFR. Mobile phone cameras are improving all the time and can produce good images to process.

The flash on cameras can act as an in-built light source for lighting the subject. Just make sure that the light is distributed evenly over the subject, when possible.

The flash should be the brightest light in the room.

Video cameras

For video we recommend the webcam **Logitech HD Pro C920** and later models which have functions for backlight compensation, zoom, sharpness etc.

BFR works with most modern WebCams for video input. A high quality mini DV Camcorder will also give good results. BFR also works with analogue cameras - you will need a connection from analogue camera to computer for this.

Live-streaming into the computer is preferred by most users. WebCams will generally live-stream. Camcorder 'Firewire' port to Computer Firewire port is good for high-quality live-streaming - you will need an IEEE P1394 interface for Firewire. Please check that the Camcorder/WebCam is compatible with your system before buying.

Note* Most modern video camcorders, which record to an internal storage system for later playback, are not capable of live-streaming. If this is the case, you can still save the recording and play it back through BFR as an mpeg movie file and apply the filters you require. This filtered movie can be saved using the functions within BFR.

BFR will filter almost any image on your computer but finds very large files (more than 3000 x 3000 pixels) more difficult to process. BFR incorporates an automatic re-sampling function that reduces the size of any 'oversize' images.

For more information see our Help Guide: Getting Started with BioField Reader

Printer: Colour - laser or inkjet

Customer Support is very important to us and given top priority – we aim to answer all emails within 48 hours. Skype sessions are also available on request. Feel free to contact us if you would like to discuss how Biofield Imaging may be able to help you in your clinic or research - biofieldimaging@gmail.com

Free BFR System Updates can be downloaded from the Internet.

Installation and setup instructions are in the BFR comprehensive tutorial. User Manual available as free download from www.biofieldimaging.com

Support given by Resolutions' Team - Jane Solomon and Alan Bennett via email.
Jane, a registered acupuncturist with over 30 years nursing experience, is also a healing practitioner and has more than 25 years' experience in using biofield imaging technology. She has helped many practitioners incorporate Biofield Imaging into their clinics. Jane worked with Harry Oldfield for 7 years and was responsible for setting-up the Centre for Biofield Sciences scan room at MIT College, Pune, in India. She has a great deal of experience in analysing biofield scans, including for health and the paranormal.

Alan has many years' experience in Biofield Imaging technology programming as well as many years' experience of paranormal research.

Jane has a great deal of experience in analysing biofield scans for health and paranormal research.
