## Applications

Your BioField Reader system can be used to assess the energy/light of:

**Crystals** see different types; after energising and use for healing

**The Paranormal** see the unseen, energetic connections, kundalini,

**Earth energy** environment, plants, crops,

**Consciousness studies** meditation and altered states of consciousness

**Healing Therapies** before, during & after therapy; Reiki: properties of healing energy from healers

**Buildings & rooms** see everyday energetic qualities; see before & after feng shui or vastu

**Animals** in health (balance) and imbalance

**Homoeopathy & essential oils** energy of remedies and their effects

**Sites** monuments, holy sites or places with known energetic vibrancy

**Spiritual** holy men and women

**Food** organic and non-organic, food infused with healing energy

**People** in their normal environment

## **Where ancient wisdom and modern technology meet**

For thousands of years there have been individuals who claim to see what has traditionally been called an 'aura' of light surrounding a person. Some sensitives report that this 'aura' (or biofield) gives them information about a person's state of physical and emotional well-being. Most people are unable to see this 'aura' or biofield.

Modern technology, like BioField Reader (BFR), is able to reveal normally 'invisible' light patterns by the application of specially designed digital filters. The BioField Reader filters ascribe different colours to various, subtle intensities of light, and some filters (filter 001) produce images which correlate closely with what many sensitives say they see in the biofield in different states of well-being and lack of well-being.

### **Promoting balance and well-being**

Researchers and therapists have found that when people feel well this will be reflected in a more balanced field which shows lots of green and also the colours of vitality, e.g. yellow and orange.

If someone is stressed, or has a lot of tension in their body, then more red 'congested' pools of light and irregular patterns of light on and around the body are seen.

Once an initial scan has been recorded and therapy commenced, subsequent scans often show less red and an increase in green/yellow/orange as people feel better. The patterns, e.g. shapes of chakras and energy flow lines, e.g. meridians have been seen to also improve. Seeing is believing and this visual confirmation can be very important to aid progress towards well-being and help morale.

Changes towards more balanced colours and patterns have been seen by some therapists after therapy, rest and relaxation, switching to a more healthy diet etc.

With BFR the therapist is able to provide scans and supply a detailed report for each client.

## About BioField Reader

BioField Reader (BFR) processes images by filtering gradations and patterns of light not normally visible to the human eye, giving insights into the subtle energy around us. BioField imaging is a completely non-invasive technique using a camera (still or video), a computer, and the specialised BioField Reader software. BFR has the capability to live-stream video sources including High Definition and for Full Screen viewing depending on camera specifications.

BioField Reader allows you to process both photos and moving video stream. It offers enhanced screen resolution and fast capture speed. Features have been incorporated to help therapists and researchers to filter images quickly, save files easily, and be able to write reports to go alongside each scan. The system comes with a comprehensive tutorial.

BFR has 20 filters. We have done most of our Research with filter 001 and advise new users to start with this filter.

### 3 in 1 BioField Reader Imaging System using digital light filters

#### BFR Photo Image Mode:

- BFR enables you to process (filter) any jpeg or bitmap which you have stored on your computer.

#### BFR Video Mode:

- BFR Video mode enables you to process (filter) live-stream video sources including HD cameras & Web Cams.

- With BFR Video (BFRV) mode you can play movies (videos) for processing with the full range of BFR imaging effects.

- You can make processed (filtered) recordings & replay them or burn them to a DVD as MJPG.

- You can replay processed (filtered) footage.

- You can capture still snapshots from your video stream.

#### BFR Batch Processing Mode:

- In addition to the BFR Photo Image Mode enabling you to process (filter) any single jpeg or bitmap which you have stored on your computer, 'Batch Processing Mode' enables the simultaneous processing of multiple images/photos, all with one click of the mouse.

Biofield image (left) after processing with BFR.

This is a fit young man who has a nicely developed and vibrant brow chakra.

He also has excellent vibrant energy/light over his heart and lungs

## BioField Reader - Acupuncture

Changes can be seen in the BioField patterns and colours before and after acupuncture treatment. The man below complained of an irritated, red, left eye and skin eruptions over the nose and temples which were worse with stress.

### Before Acupuncture

Diagnosis was Liver qi stagnation, Liver yang rising, Heat in Yangming, Liver invading Stomach and Spleen.

Treatment principle: course Liver, nourish Liver Yin to subdue Liver Yang, Clear Heat in Yangming, tonify Stomach and Spleen. Course stagnant qi locally around left eye.

Local points around eye: Bladder2, GB1, GB14, Yingtang and GB20. Points were tender.

### After 2 Acupuncture Sessions

After the first treatment two small, yellow spots appeared on his upper lid. These resolved spontaneously but he said that he felt as though something was 'working its way out' and that his eyes felt much less irritated.

He reported feeling calmer and more optimistic in general.

Treatment had been centred on his left eye but on the third treatment the right eye was treated too.

**Knee Pain:** Seeing where the 'light' or 'qi' is congested can help guide the therapist as to where to place the needles. This woman came for acupuncture suffering from bilateral knee pain. A TCM diagnosis was made and a BioField scan done using BFR. Tender (ahshi) points were found at Spleen 9 and Spleen 10. which are red and congested on the scan. Relief was felt after needling these areas as well as Spleen 5.

It is interesting to note that she has had cellulitis on both lower legs exactly where the legs show as blue and mauve. The skin in these areas remains shiny, sensitive and sometimes feels very hot.

## BioField Reader - Acupuncture

### Sprained thumb

Middle-aged woman with left thumb 'sprain' – she thinks may have been caused by applying too much pressure with her thumb when cleaning the oven. She had not previously had problems with this digit. Complained of upper back/shoulder tension mainly on left side.

She complained of pain when gripping and applying pressure between thumb and forefinger when lifting objects with left hand. She was unable to take an acupuncture needle out of its sterile packaging before treatment as the movement caused too much pain.

Pain was mostly felt at acupuncture points LI4, and Lu10.

On palpation: tender points were LI15, LI4, LI6, Lu10

SJ5 was seen to be congested (lots of red seen over area) SJ15 was found to be very tender and lumpy.

Acupuncture treatment to LI4, LI6, Lu10, SJ5 needles retained for 20 minutes. De qi – dull ache obtained on all points. One needle manipulation to stimulate points after 10 minutes. Acupressure to Left SJ15 elicited a warm spreading feeling down arm and across top of chest.

Scans were taken with same lighting, camera position and position of hand. After acupuncture less pain felt around Lu10 but LI4 ached more. She was able to use take a needle out of packaging with no pain on gripping package and needle.

Before acupuncture

After acupuncture

**Before acupuncture:** general red congestion seen to back of forearm, (SJ5), this congested line tracking to web between thumb and forefinger where it joins the large Intestine channel (LI4). Knuckles and fingers show congestion in light. Red/pink energy seen at finger tips and in 'halo' around hand.

**After acupuncture:** red congestion diminishing on back of hand and along in web of thumb. Fingers also clearing and becoming more blue/green. There is more green (balance) seen at finger tips.

### **General note about acupuncture and BFR**

*Analysis of numerous BFR scans suggests that blockages/congested points appear to occur along acupuncture meridian pathways. This may provide useful information for the acupuncturist when deciding on a treatment plan. The same useful information may be available for other therapies. More research is being carried out and will be included in future updates of the Manual.*

## BioField Reader- The Environment & Tai Chi

**BioField Reader is an interactive system** which allows the user to conduct experiments whilst seeing live, filtered, video stream on their computer screen. Research conducted using BFR has enhanced understanding of the mind-body connection as positive changes have been seen whilst meditating, having or receiving healing, or during practices such as Qigong and Tai Chi.

**Energy of the Environment & Buildings:** the energy of landscapes and buildings can be assessed.

### Scans taken 'Before' and 'After' Tai Chi

The woman below is very experienced in Tai Chi . After just 10 minutes of Tai Chi remarkable changes can be seen in her energy field. She did a strong breathing exercise then stood in a neutral 'rooting' posture, sending her chi down through her feet into the floor.

In Scan below - red 'pools' on neck showing possible blockages in energy or tension build-up. Red 'pools' of red congested energy seen to arms, throat and face

Before Tai Chi

In scan below - there are reduced red pools on neck and face; larger areas of blue seen on throat and face suggesting that that areas are beginning to balance & energy is flowing

After 10 minutes Tai Chi

Tai Chi scans taken by Debbie Hodgson

[www.energyauraimaging.co.uk](http://www.energyauraimaging.co.uk) [energyauras@btinternet.com](mailto:energyauras@btinternet.com)

## BioField Reader - Reiki

Below are scans of the same young woman before and after Reiki healing. Reiki was given for 20 minutes. In the 'after' Reiki scan there is generally less red (blocked energy) seen and more green areas. Green is often seen in healthy, more balanced areas.

Healing was given to the left side upper back, top of left arm, lower back and back of legs where the subject reported pain and tight muscles. After the healing she reported less pain in her neck, upper and lower back areas. She generally felt more relaxed.

### Before Reiki:

Red congested areas seen to left side of neck/upper back and top of left arm and in field to left of neck - where this woman had pain.

Red also seen over lower back where she also had pain.

### After Reiki:

No red in field to left of neck. Red congestion on neck and left shoulder area has become green. Red bands to right of neck have moved down.

Less red at top of back and lower back - where more green is seen.

Less pain felt in neck and back after Reiki

## BioField Reader - Healing

During healing, energy is directed towards the patient. Some healers can sense or 'see' this energy and have an idea of where changes are occurring within the patient's energy field. Most of us are unable to see these changes occurring. BFR shows changes in the energy/light which may be significant as a visual representation of the normally invisible, subtle changes which occur during healing. A way of showing that healing is not all in the mind.

Scans have been taken before, during and after healing sessions and changes of light have been noted. During healing a diminution of red 'pockets' often occurs. Blue and violet are often seen to increase during healing and can remain for some time afterwards.

**Attunement:** Here we see the healer and subject before attunement to healing energies. Note the 'pockets' or 'pools' of red on both healer and patient's heads. This colour and patterns suggest stress in the field or where energy is not flowing smoothly.

The lighting and conditions for this ,and the picture on the right are identical.

**During healing:** note bright green light between hands of healer. This bright green light is also seen over healer's heart and solar plexus chakras. Could this be the frequency of the healing energy coming through? Note also that there is a lessening of red light on both patient and healer's heads and an increase of blue/violet light to patient's head and face. There is more blue/violet on arms of healer in this picture.

## BioField Reader - The Paranormal

Your eye has a very limited capacity to perceive all the signals around you. You need a microscope to see very small things, a telescope to see things far away, and an infra-red camera to see in the dark. Similarly, digital light filtering software provides another way of allowing you to see more information about your surroundings.

Originally, digitally filtering the light around subjects was to aid human health assessment. However, whilst investigating this health application of the software in our research we discovered that various practitioners were receiving 'paranormal' results - i.e. the images the light filtering produced were not in the 'normal' or 'expected' category.

### Healing Energy

This healer focused her thoughts on 'channelling' energy from her hands as this picture was taken. Note the swathe of red light under her hand and around her navel area.

Red light obliterates the view of part of the healer's trousers. It can be seen coming up the outside of her thigh and tracking towards the energy at the base of her spine. It may then be accumulating at her navel area before being channelled to her hands.

### Meditation & Cosmic Egg

Dr Yamuna conducted an experiment in her clinic, to see how Kundalini meditative states affect the light patterns around the person meditating. Image 1: subject starts her meditation. Image 2: subject goes deeper and maintains the Kundalini meditative state for a few minutes. Image 3: subject stands up after meditation - her body shape begins to change in the filtered image and the outline of an oval shape begins to form. Image 4: An 'egg' enclosing oval bands of colour completely replaces the subject's form. Image 5: another woman in the room enters the camera's field of vision and appears to 'disturb' the subject's light field and so 'breaks' the 'egg' pattern. There could be many interpretations of this series of events and the resultant images captured by the digital light filtering equipment. Dr Yamuna felt that one explanation could involve the 'cosmic egg' from Indian spiritual philosophy. We therefore now refer to this as the 'Cosmic Egg' experiment.

The 'Cosmic Egg' Experiment: influence of Kundalini Meditation on human light field, measured using a Digital Light Filter in clinic of Dr K. S. Yamuna (Anaesthesia), Mumbai, India

1. Subject starts her meditation. 2. Subject goes deeper and maintains the Kundalini meditative state for a few minutes. 3. Subject stands up after meditation - her body shape begins to change in the filtered image and the outline of an oval shape begins to form. 4. An 'egg' enclosing oval bands of colour completely replaces the subject's form. 5. Another woman in the room enters the camera's field of vision and appears to 'disturb' the subject's light field and so 'breaks' the 'egg' pattern.

Images of Meditation and Cosmic Egg shown by kind permission of Dr Yamuna, a medical doctor in Mumbai. Another digital light filter, similar to BFR, was used to capture her images.

## Applications

### The BioField Reader System can be used to assess the energetic status of:

- people, in health and dis-ease
- before, during and after complementary therapies e.g. acupuncture, healing
- people and the environment in paranormal research and inter-dimensional research
- meditative states and consciousness studies
- people, in their normal living and/or working environment
- animals, in health and dis-ease and in their normal living environment
- Holy men and women
- plants, to assess if their growing environment is helping them thrive
- crops, grown organically and non-organically
- food, organic and non-organic and food infused with healing energy
- buildings and landscapes
- buildings and rooms before and after feng shui or vastu
- crystals, before and after energising for healing
- dowsing, homoeopathic remedies
- the energy around certain monuments, holy sites or places with known energetic vibrancy

### Animals: BioField Reader is used to assess the light on and around animals.

The patterns and colours of the BioField can be seen through the fur.

Unfiltered photo

With filter applied

With filter applied

**Feng Shui and Vastu:** Feng shui and Vastu practitioners use BFR to assess and show the energetic changes of a room before and after their therapy.

**Untidy room.** The light is not flowing, there is not very much yellow, green or orange to be seen. Light on the wall is less vibrant and bright than that seen in vastu/feng shui rooms. The light is not able to flow around the room; gets stuck in places e.g. the floor. Darker reds and mauves seen. The inhabitant is not likely to feel good energetically.

**Room after Feng Shui/Vastu.** There is plenty of light flowing around the room as can be seen by the orange, green and yellow colours. There are no dark reds, mauves and browns which would indicate areas where energy or light is not flowing. This is a vibrant room where the inhabitant would feel good.

## BioField Reader - Crystals

Research involving crystals has shown some interesting results.

### Crystal Before Healing

This crystal has not yet been 'energised' by the healer. Although some light is visible within the crystal, it is dull compared to the energised crystal during healing, shown on right.

### Crystal During Healing

This crystal is energised for healing. The image shows a more vibrant, bright and light-filled crystal when compared to the crystal before healing on the left.

## Crystal Experiment - Intention, Consciousness & Thought

The BFR images below show the changes in the light on and around a clear quartz crystal which has positive thought focused on it by a group of 20 people who include healers.

Crystal at start of experiment

Crystal half-way through experiment

Crystal after 30 seconds of focused thought

Click link to see [moving video stream of the Crystal Experiment](#) above.

## BioField Reader - Meditation

This is a series of still camera shots taken during a mass meditation in Pune in India. We are able to see changes in light, normally unseen by the naked eye, revealed by the application of BFR filter 005.

Control shot of crowd  
before meditation

On the left we can see the control photo taken before meditation started. The group of children were to meditate to music for one hour. All photos were processed using BFR filter 005.

Meditation has just  
started

The meditation had just started when the photo on the left was taken. The meditation is guided by the children's teacher (seen on the right of the photo) who was standing on the stage. During the meditation the teacher sang bhajans and songs. There is already some brightening of the light around the room and among the children.

During meditation

The meditation continues. The light in the hall is becoming brighter with higher frequencies coming in.

At the end of the  
meditation

At the end of the meditation a spectacular change in the light of the hall can be seen. Higher frequencies of gold, yellow, greens and oranges are apparent. The whole crowd looks lighter. Sunil Bargaje, who took the photos, and is an experienced BFR user commented, 'There was generally an enhancement of energy in the crown chakras of the children and a lightening of the energy in the room.'

## Analysis of the colours with BFR

Although similar to what ‘sensitives’ say they see, the colours shown by BioField Reader are not ‘true’ colours but are generated by BFR’s filters after the processing of subtle light gradations.

The basic colour profiles below can give some idea of what the BioField may reveal a person’s overall balance. When analysing the human (or animal) biofield, both the colours and patterns are considered. Both practitioners and their clients can learn to recognise and interpret the colours and the patterns. See [www.biofieldimaging.com](http://www.biofieldimaging.com) for examples of biofield scans and analysis.

### Biofield Colour Profiles

<b>BioField Colour</b>	<b>Analysis with BioField Reader</b>
<b>RED</b>	<i>Red represents will-power, strong drive, energy, the life force or ‘kundalini’ energy. It can be seen both in the base energy centre and in the lines of energy flowing around the body. Thin flowing lines suggest balance whereas thick lines, or pools of red suggest that the energy is congested and may reflect an area where there is an imbalance.</i>
<b>ORANGE</b>	<i>Orange represents vitality, creativity, enjoyment of life. It is associated with the navel energy centre.</i>
<b>YELLOW</b>	<i>Yellow represents vitality, mental activity, It is traditionally associated with the solar plexus energy centre.</i>
<b>GREEN</b>	<i>Green is thought to be the colour of balance and harmony. Green may reflect areas of balance throughout the body.</i>
<b>BLUE</b>	<i>Blue is associated with expression and self-expression Blue may be a ‘cooling’ colour, brought in to balance an area of inflammation of the body.</i>
<b>VIOLET</b>	<i>Violet is associated with the brow energy centre. It has been seen in the biofield of ‘holy men’ and ‘holy women’, in individuals who meditate regularly or in those who are involved in spiritual development.</i>
<b>WHITE</b>	<i>White is associated with the crown energy centre. It represents the highest state of vibration picked up by the BioField Reader and may be seen above the head when the crown energy centre is balanced.</i>
<b>MAUVE/ MAGENTA</b>	<i>If seen in pools with red may mean sluggish flow of energy and suggests an imbalance which may not be transient, but may have been there for a while, e.g. an old injury site</i>

## BFR Functions

BFR is versatile and easy to use and helps you see the subtle energy around us. It has enhanced features and additional functions to help the user gain more information from their biofield scans. Some are shown below.:

### Applying a filter

The BFR filters are the most important part of the BFR program. You can apply a filter to any jpeg, bmp, or to moving video footage.

### Altering Focal distance

Changing the 'Focal distance' is a useful function which helps the user 'see' the biofield in another way. In effect, adjusting the focal length takes the picture out of focus so that finer detail is lost but the eye is assisted to see areas which are more balanced/less balanced (in therapy scans) or more vibrant/less vibrant (for other types of scans e.g. environment studies or crystals etc). This function can help therapists show their clients where their field is balanced/imbalanced. In the different versions of the same image below, 'Focal distance' has been altered in images 3 and 4. Red focal points are seen on face, solar plexus, upper chest and lower right-side of abdomen. The eye is also drawn to the areas of mauve on the throat, abdomen and arms. The chakras most out of balance are throat and solar plexus.

1. Original photo

2. Filter 001 applied

3. Filter 001 applied and focal distance altered. Areas of imbalance stand out as red and mauve

4. Filter 001 applied; focal distance altered as previously and colour and contrast adjusted to help highlight areas of interest even more

### Bi-focal length

'Bi-focal length' emulates the effect of 'double vision' to various degrees. Changing the bi-focal length is another useful function which helps the user see the biofield in a different way. It helps guide the eye to areas which are more out of balance

## BFR Functions

### Adjusting brightness/contrast

Adjusting the brightness and contrast can also enable the user and client to see the colours and layers of the field around the body more easily – see scans below.

Filter 001 applied

After filter 001 was applied, focal distance was adjusted and colour and contrast altered. The layers of the biofield are now more easily visible.

Adjusting the brightness and contrast can also enable the user and client to see the colours in a smoother and more vibrant way which helps guide the eye to blocks of colour as finer definition is lost.

Adjusting the brightness and/or contrast prior to applying the filter is a big advantage for poorly-defined pictures, or pictures taken in low-light conditions, giving much better definition to the end result. In addition, by altering the contrast and brightness, certain areas of the scan may be highlighted and make them more visible. Saturation (colour depth) can also be fine-tuned. Changing the saturation makes the colours in an image more vibrant.

**Adjusting Image Colours** Adjusting the brightness and colours prior to applying the filter is a big advantage for poorly-defined pictures, giving much better definition to the end result.

Adjustments are not usually needed to photos/video grabs which have been taken in good lighting conditions. You may wish to make adjustments if you, for example, want to accentuate a particular colour. You can make adjustments to the colour either before, or after, the application of filters. You may wish, as part of your research, to make adjustments to colour. For example, you may want to accentuate a particular colour when analysing certain subjects e.g. water or crystals. You may also choose to attenuate one colour while accentuating another.

**Using Subject Guides** BFR has special 'Position Guides' to help you line up the subject of your scans so that the subject is in the same place for all scans. The 'Position Guides' will also aid analysis of the scans in real time. You can select which guide you would like to use. You can also select a colour, either magenta or cyan, depending on which shows up best on your subject.

## BFR Functions

### Using Subject Guides

There are 10 options to choose from. You may wish to develop your own uses of these guides:

- **vertical line** in middle of screen helps to position subject centrally. It facilitates analysis of left/right balance in the subject
- **horizontal line** in middle of screen helps to position subject centrally. It facilitates analysis of top/bottom balance in the subject
- **both vertical and horizontal lines** for simultaneous left/right and top/bottom balance analysis and gives more scope for positioning your subject very accurately
- **circle** could be used to line up a non-linear subject. For example, we have found it useful for head and shoulder shots where the head of the subject is within the circle. This guide facilitates positioning for subsequent scans

Other Guide choices, including a square guide, can be found within the drop down box.

The Guides are only visible during live-streaming but are not seen on the recorded video stream or still grabs.

Circle subject guide lines in use during live streaming

Other BFR functions can be found within the program and are explained comprehensively in the Tutorial which is on your security dongle.

## BioField Reader - Cameras

### Still Digital Camera

The bands and colours of the field around the body can differ depending on the lighting and camera used. We advise that if you want to get used to using BioField Reader and analysing scans then it is best to have the same set-up for all scans as much as possible. Some people prefer to use a still camera and others find still cameras useful when on location. Here are some examples of photos taken with still digital cameras which have been processed with BFR.

Area where most pain felt

Photos taken with Still digital camera, no flash and full-spectrum fluorescent lighting on ceiling. There is good differentiation and variety of colours around and on body. Congested and more balanced areas show.

The bands and symmetry around the body are analysed in the same way as with webcam. Streamers, bulges and connecting bands show on scans taken with all types of cameras i.e. on webcam, still camera and mini Camcorder with firewire.

Photo taken with Still camera, flash and normal ambient lighting in room. This is a good scan. There is good differentiation and variety of colours, streamers seen at back of neck/head. Red congestion shows clearly on brow and throat. Green balance seen too.

## System Requirements

BFR works on most modern computers. BioField Reader is capable of processing a great deal of information. The recommended specifications below are guidelines to allow for fast processing of data.

### Recommended System Requirements

Windows XP (SP3), Vista, W7, W8, W10.

Dedicated Graphics Card: minimum 1GB Memory (RAM): minimum 4GB

Please note:

The BFR software has not been designed for use with touch screens (for example, Windows touch screen) but operates with a mouse.

### Minimum System Requirements

*Hardware: CPU: 2.5GHz Memory: 4Gb Video: 24bit 128Mb graphics card CD drive*

*Software: System: Windows7 Direct Show Video settings: 1024 x 768 24bit colour*

### Camera Types

BioField Reader is not dependent on camera types as it functions solely by image processing. **We recommend the webcam Logitech HD Pro C920 (which has functions for backlight compensation, zoom, sharpness etc.)**

BFR works with most modern WebCams for video input but a high quality mini DV Camcorder will give better results. It also works with analogue cameras. (you will need a connection from camera to computer for this).

Live-streaming into the computer is preferred by most users. WebCams will generally live-stream. Camcorder 'Firewire' port to Computer Firewire port is ideal for high-quality live-streaming. Please check that the Camcorder/WebCam is compatible with your system before buying.

Note\* Most modern video camcorders, which record to an internal storage system for later playback, are not capable of live-streaming. If this is the case, you can still save the recording and play it back through BFR as an mpeg movie file and apply the filters you require. This filtered movie can be saved using the functions within BFR.

BFR will filter almost any image on your computer but finds very large files (more than 3000 x 3000 pixels) more difficult to process. BFR incorporates an automatic re-sampling function that reduces the size of any 'oversize' images.

**Printer:** Colour laser or inkjet

## Business Benefits

With BioField Reader you can host your own interactive display in your own retail outlet or clinic. You can create a buzz and attract new clients to help your business grow. Your client group will be increased through using our modern, state-of-the-art technology that's simple for everyone to understand and helps to validate the results of your services right in front of their eyes.

### You can:

- Create a buzz about using new cutting-edge technology that is unique to your establishment
- Create additional revenue with existing clients and their pets
- Attract new clients and new traffic by holding 'Open Days' or offer free taster sessions
- Cultivate loyalty and repeat business by showing your clients how they are progressing over time

### Trade Fairs, Shows and Events

- Attract crowds at shows, events and trade fairs
- Stand out from the crowd with your own unique service
- Help networking with other therapists by showing them their own unique BioField
- Create a fun way to interact with potential clients
- Advertise your services for groups who meet regularly e.g. meditation, healers, tai chi, yoga. They may want to book you for a group session
- Offer to do an 'after' scan for someone who is having therapy at the show

### Spas and Health Farms

- Show clients their energetic well-being and areas which need balancing before starting treatment
- Validate your treatment and their own life-style changes with 'After' scans
- 'Seeing is believing' and helps clients see that their increased feeling of well-being is reflected in a more balanced biofield
- Show clients the real-time flow of their energy, on the computer screen, as they receive their healing or therapy

## Taking a BioField Scan

### Manual:

BFR comes with a comprehensive User Manual which covers lighting; clothing of subject and scanning room set-up.

Some users have a dedicated space for scanning and use full-spectrum lighting. Others have a well-lit room and use a still camera with flash. Both methods give good results.

White cotton clothing can be worn for scans but bare skin gives best results and is easier for analysis so, some users prefer to have clients in their underwear if this is acceptable.

If you are doing comparison scans of, for example, 'before' and 'after' a healing therapy to see improvement, then try to have the scanning conditions the same as much as possible for both scans.

### Procedure:

- Have your camera and or lighting in place. Preferably use a tripod, which helps give a steady picture and allows you to have your hands free
- It is important to get the client to relax, make sure they are warm and well-hydrated. Put them at their ease
- Stand them against a matt, light-coloured wall or screen

Still camera

Photo

Filtered image

Video camera

Filtered image

If using digital still camera, take still shots and then the BFR program will filter the images for you, either singly, or as a batch. If using a webcam or, video camera, you can see in real-time the moving filtered images on full screen. You can record the whole session and/or capture snapshots during the session. Afterwards, look at the images with your client and show them areas where they are relatively balanced and areas where therapy may help them. Give your clients their scans by: printing hard copies out for them to take away, or by emailing the scans along with a personalised report .

## Testimonials

Here is a selection of testimonials from users of Resolutions BioField imaging systems.

*“We set up our camera and computer at a local Healing Fair and took scans of people's faces. We told them where we could see good balanced colours and patterns and where the energy was out of balance. Time and time again, people were amazed that we could see where they had problem, their sinuses, eyes, throat or, a problem tooth that was highlighted in a red colour! We didn't stop all day and had problems getting away for two minutes to get a cup of tea. We had a constant queue and were far the busiest stand at the Fair. We met lots of lovely people and got some new clients too.” JT London*

*“I started using BFR in my hypnotherapy practice. I have been able to show people in real time on the computer screen, how their energy is affected by negative thoughts or emotions. I can also show them how the energy balances as they work on clearing that energy by positive affirmation. It has been a great boon to my practice.” VP Delhi*

*“We bought our biofield imaging system and thought we'd take it to a Mind, Body and Spirit exhibition with us. We were worried that the lighting wouldn't be good enough so we took along a small light on a stand. Unfortunately, the light didn't work so we had to make do with the lighting in the hall. We needn't have worried as, although the lighting wasn't perfect we were still able to see a lot of relevant information about each person's energy field on the computer screen. Loads of people came and had a look and asked us about the system. We talked so much that day!” PS Devon*

*“As an acupuncturist I am always trying to find ways to explain the concept of qi to patients. I have found that showing them their energy scans makes it a simpler process. I can show them where their qi is blocked – often in a place where they have pain . Patients enjoy having scans done during their course of treatment. They often comment that they can see where they are balancing and look very pleased with themselves. They seem to relate to their pictures which seem to mean more than me telling them that their qi is flowing better or that their tongue is looking more healthy. A picture does paint a thousand words and biofield imaging has helped validate my treatments to people. Patients are incentivised to be more compliant with their treatment and in making those small changes to diet and lifestyle which can make all the difference.*

*I find the scans fascinating too – not only for seeing a patient's progress but also for seeing how the qi is flowing. I can often track a meridian along its path and see where it may be blocked. I have noticed that some luo points may be blocked and there are red 'pools' of blocked energy between the pair of channels. For example at Stomach40, red pools can often be seen linking with the Spleen channel across front of leg.” LSC*

## BioField Reader

**BioField Reader (BFR)** processes images by filtering gradations and patterns of light not normally visible to the human eye, giving insights into the subtle energy around us. Resolutions have over 25 years of ‘subtle energy’ imaging experience and supply high quality products at affordable prices.

**Warranty** System comes with two year warranty. Users are advised to insure their systems. Lost dongles are not covered by warranty. 28 day returns policy on first system, if purchased directly from Resolutions.

**Backup** Full technical support and free backup via internet; help with analysis of processed images. Comprehensive tutorial with every system. User Manual available as a free download. [Click here](#) to download Manual.

**Training** Available in UK and India. Also e-training available via internet. Certified courses.

**Price of Systems** See our website. This includes software, 2 year warranty, security dongle, internet back-up and support, free updates.

## About BioField Reader - Filters

The BFR filters are the most important part of the BFR program which distinguishes many subtle grades or qualities of points of light, which the eye does not normally see. BFR analyses each point of light and a decoded image is the result. This decoded colour image is seen in the processed (filtered) images.

Below are examples of all the BFR filters. All images were taken in optimum lighting conditions using full-Spectrum lighting and a video camcorder with Firewire.

All BioField Reader filters show subtle changes in gradation or frequencies of light. Some filters have the ability to filter more gradations of colour and tone and will therefore show more detail.

Other filters have less filtered gradations of light and therefore show less detail but give more of a general, or macro overview of the biofield on and around a person, object, or environment. The filters which show more detail can be used for more detailed analysis of the BioField.

**Filter 001 (top left) is the standard BFR filter which is most often used in our research.**

We generally check what filter 001 shows and then may run the still photo or video footage through the other filters to see if they reveal more information than filter 001.

### **Disclaimer**

The manufacturers of BioField Reader software take no responsibility for, nor make any claims in connection with BioField Reader.

This program is a research tool and whilst interesting anomalies have been seen they have not been validated by clinical trials.

BioField Reader is not intended for the purpose of diagnosing, treating, curing or preventing medical or physical problems and does not take the place of medical diagnosis.

The BioField Reader system is intended for research purposes only and does not take the place of proper diagnosis and treatment by a properly licensed healthcare professional.

Anyone with a health problem is strongly advised to see a medically qualified practitioner or properly licensed healthcare professional

The manufacturers of BioField Reader software make no claims as to its suitability for any particular purpose.

It is a flexible system that is designed to work with many external devices, but no guarantee is given for reliability or compatibility with any particular computer or device.

Resolutions reserves the right to update or change its programs and hardware interfaces to meet with changes in technology.
